

Give the player the power!!!

- Give the player a button to “Taunt” into a battle
 - Now if player wants to do more RPG or more Platforming, they get decide how much of each they want to do

- Balancing mechanics:
 - Platformer attacks should be substantially weaker, but if they are strong enough to kill enemy, will not trigger battle
 - Some enemies that are hard if not impossible to attack via platformer
 - Some enemies that are annoying in battle sequence that would be better
 - Mechanics (as depicted above) that limit how and when you can enter battle sequence
- Can switch between characters as desired, but some form of cost, being vulnerable, wasting energy or turns, etc.
